Subject: CCPOA Program

My goal is to have an Excel spreadsheet like attached. It will have about 15,000 lines of data.

I would like to be able to open either a word document or a pdf, start typing the last name and have the data autopopulate. Then, if changes need to be made, they can be and "autofeed" back to the excel document. Ideally, perfect world, magic wand, I would like the spreadsheet to somehow change to indicate that it was accessed and either remained the same or was updated. Maybe by a highlight color?

The biggest problem I anticipate is having a whole lot of Joe Garcias and Mike Smiths (for example).

I'm also happy to walk through what the process is and accept suggestions.
